November 2026

Dear Hiring Manager,

I am writing to express my strong interest in the Software Developer position. With over 4 years of hands-on experience building production-grade web and business applications using React, Node.js, Next.js, and React Native, I am excited about the opportunity to contribute my technical problem-solving and software engineering skills to your engineering team.

Throughout my software engineering career at Akij iBos and Mediusware Ltd., I have contributed across the entire development lifecycle of mission-critical enterprise systems. At Akij iBos, I worked on core ERP modules including Procurement, Purchase Request, and Purchase Order workflows used daily by business operations. I also spearheaded the Visitor Management System integrated with ZKTeco turnstile gates (implementing automated hardware synchronization and QR-based time-restricted access) and refactored Standard Chartered Bank's statement collection architecture with Quartz automated CAMT XML retrieval and duplicate-safe processing over 7,051 live test transactions.

At Mediusware Ltd., I developed high-performance POS and warehouse management modules with responsive keyboard-driven shortcuts, engineered a multi-tenant drag-and-drop website builder with reusable component schemas, integrated complex GraphQL APIs, and built a flight booking platform with Amadeus API integration.

As a self-taught engineer, I pride myself on clean architecture, continuous learning, and effective collaboration across cross-functional teams. I look forward to discussing how my skills and experience can support your company's technology goals.

Sincerely,

Nadim Chowdhury
